

## Assignment - 4

Assignment Date	17 October 2022
Student Name	SHIRLIN JENO WINCY J
Student Roll Number	49621911103
Maximum Marks	2 Marks

### Question-1:

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud

### CODE 1 :

```
#include <WiFi.h>
#include <PubSubClient.h>
void callback(char* subscribtopic, byte* payload, unsigned int
payloadLength);
//-----credentials of IBM Accounts-----
#define ORG "iqj6wd"//IBM ORGANITION ID
#define DEVICE_TYPE "IOT_FIRE"//Device type mentioned in ibm watson IOT Platform
#define DEVICE_ID "23032002"//Device ID mentioned in ibm watson IOT Platform
#define TOKEN "1911103abcdefgh" //Token
String data3;
char server[] = ORG ".messaging.internetofthings.ibmcloud.com";
char publishTopic[] = "iot-2/evt/Data/fmt/json";
char subscribtopic[] = "iot-2/cmd/test/fmt/String"; char
authMethod[] = "use-token-auth";
char token[] = TOKEN;
char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;
WiFiClient wifiClient;
PubSubClient client(server, 1883, callback ,wifiClient); const
int trigPin = 5;
const int echoPin = 18;
#define SOUND_SPEED 0.034
long duration;
float distance;
void setup() {
  Serial.begin(115200);
  pinMode(trigPin, OUTPUT);
  pinMode(echoPin, INPUT);
  wificonnect(); mqttconnect();
}
void loop()
{
  digitalWrite(trigPin, LOW);
  delayMicroseconds(2);
  digitalWrite(trigPin, HIGH);
  delayMicroseconds(10);
  digitalWrite(trigPin, LOW); duration
= pulseIn(echoPin, HIGH);
distance = duration * SOUND_SPEED/2;
```

```

Serial.print("Distance (cm): ");
Serial.println(distance);
if(distance<100)
{
Serial.println("ALERT!!");
delay(1000);
PublishData(distance);
delay(1000);
if (!client.loop()) {
mqttconnect();
}
}
delay(1000);
}
void PublishData(float dist) {
mqttconnect();
String payload = "{"Distance\":";
payload += dist;
payload += ",\\"ALERT!!\\":"\\"Distance less than 100cms\\""; payload
+= "}";
Serial.print("Sending payload: ");
Serial.println(payload);

if (client.publish(publishTopic, (char*) payload.c_str())) {
Serial.println("Publish ok");
} else {
Serial.println("Publish failed");
}
}
void mqttconnect() {
if (!client.connected()) { Serial.print("Reconnecting
client to "); Serial.println(server);
while (!!!client.connect(clientId, authMethod, token)) {
Serial.print(".");
delay(500);
}
initManagedDevice();
Serial.println();
}
}
void wificonnect()
{
Serial.println();
Serial.print("Connecting to ");
WiFi.begin("Wokwi-GUEST", "", 6);
while (WiFi.status() != WL_CONNECTED) {
delay(500);
Serial.print(".");
}
Serial.println("");
Serial.println("WiFi connected");
Serial.println("IP address: ");
Serial.println(WiFi.localIP());
}
void initManagedDevice() {
if (client.subscribe(subscribetopic)) {
Serial.println((subscribetopic));

```

```
Serial.println("subscribe to cmd OK");
} else {
Serial.println("subscribe to cmd FAILED");
}
}
void callback(char* subscribetopic, byte* payload, unsigned int payloadLength)
{
Serial.print("callback invoked for topic: ");
Serial.println(subscribetopic);
for (int i = 0; i < payloadLength; i++) {
//Serial.print((char)payload[i]);
data3 += (char)payload[i];
}
Serial.println("data: "+ data3);
data3="";
}
```

## Wokwi Link :

<https://wokwi.com/projects/347021585567187540>

## Output and Simulation :

The screenshot shows the Wokwi IDE interface. On the left, the sketch.ino file is open, displaying the code for an ESP32 connected to an HC-SR04 ultrasonic sensor. The code includes the necessary libraries, defines the device type and ID, and sets up the sensor and the MQTT client. The main loop reads the sensor's distance and sends a payload to the IBM cloud if the distance is less than 100cm.

On the right, the simulation is running. The console shows the following output:

```
ALERT!!
Sending payload: {"Distance":85.02,"ALERT!!":"Distance less than 100cms"}
Publish ok
Distance (cm): 84.95
ALERT!!
Sending payload: {"Distance":84.95,"ALERT!!":"Distance less than 100cms"}
Publish ok
```

Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events.

The screenshot shows the IBM Watson IoT Platform dashboard. The device 23032002 is connected and its recent events are displayed in a table. The events show the distance measured by the sensor and the alert sent to the IBM cloud.

Event	Value	Format	Last Received
Data	{"Distance":84.95,"ALERT!!":"Distance less than ...	json	a few seconds ago
Data	{"Distance":85.02,"ALERT!!":"Distance less than ...	json	a few seconds ago
Data	{"Distance":84.95,"ALERT!!":"Distance less than ...	json	a few seconds ago
Data	{"Distance":84.95,"ALERT!!":"Distance less than ...	json	a few seconds ago
Data	{"Distance":84.95,"ALERT!!":"Distance less than ...	json	a few seconds ago
